Prognosis:guarded to fair

Plan

start oral antibiotics
 enrofloxacin 100mg/ml, 5 ml, 0.15ml PO q12h 14d
 recommend nebulizing therapy to help alleviate congestion
 monitor appetite

Discharge

Discharge instructions

Follow up: Please recheck with your family veterinarian or here again if any other problems develop when your veterinarian is not available (sooner if problems develop).

Please use the medication as directed. Please follow the administration of all tablets or capsules with a small amount of water, so the medicine does not get stuck in the patient's throat. As a general rule whenever medication is dispensed, only a few days supply is given, even if a longer course of therapy is needed. The reason for this policy is to have you follow up with your regular veterinarian let him/her know how you pet has progressed on the medication. Your regular veterinarian can decide whether your pet needs a recheck and/or the medication needs refilled, stopped, or changed. This will assure your pet gets the proper care.

The next dose of enrofloxacin is due tomorrow morning.

Watch for any signs of a worsening condition such as depression, lethargy, weakness, vomiting, diarrhea or difficulty breathing. Please call if any of these are noticed. You may need to return here or see your regular veterinarian as soon as possible.

Thank you for choosing Veterinary Emergency and Specialty Center of Northern Arizona. We look forward to being here to serve you if you ever need us again in the future. Please feel free to call us if you have any questions or concerns.
